DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 2 and 3 are rejected under 35 U.S.C. 102(b) as being anticipated by Lines et al..

Lines et al. (Fig. 8) shows an array of content addressable memory cells having all the elements as recited in claims 1, 2 and 3 as follows:

- a search line SL1; and
- a bit line BL1_L parallel to the search line;

wherein across the array, search and bit lines of the CAM are interdigitated, such that the search lines and bit lines alternate across the array.

The array includes a plurality of match lines perpendicular to the search lines and the bit lines; therefore, the first matchline and the last matchline are considered the top matchline and the bottom matchline. The array including macros comprising at least two of the CAM cells is inherent.

Allowable Subject Matter

3. Claims 8-20 are allowed.
4. Claims 4-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 4-20 recite the array including macros comprising at least two of the CAM cells, wherein layouts of the macros are alternatively inverted with respect to one another within the array, such that layouts of each macro are inverted with respect to adjacent macros.

The advantage of the invention is to reduce capacitive coupling without requiring shielding or other complicated schemes.
